Sequence 4, Application US/09178109

; Patent No. 6395477

; GENERAL INFORMATION:

APPLICANT: Cockett, Mark I.

APPLICANT: Dilks, Daniel W.

APPLICANT: Chang Ling, Huai-Ping

; APPLICANT: Schol, Patricia T.

TITLE OF INVENTION: Human Potassium Channel Polynucleotides and

; TITLE OF INVENTION: Polypeptides and Uses Therefor

; FILE REFERENCE: ahp-98089

; CURRENT APPLICATION NUMBER: US/09/178,109

; CURRENT FILING DATE: 1998-10-23

; NUMBER OF SEQ ID NOS: 4

; SOFTWARE: Patentin Ver. 2.0

; SEQ ID NO 4

; LENGTH: 636

Sequence 6828, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSITITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 6828

LENGTH: 630
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         음 성 음

## ALIGNMENTS

RESULT 1 ABB79584 Kv4.3; potassium channel; human; Alzheimer's disease; heart disease; nootropic; neuroprotective; cardiant; gene therapy. 01-OCT-2002 ABB79584 standard; protein; Cockett MI, Dilks DW, Ling HC, 23-OCT-1998; 23-OCT-1998; 28-MAY-2002. US6395477-B1. Homo sapiens. Human Kv4.3 potassium channel (long form). ABB79584; (AMHP ) AMERICAN HOME PROD CORP. 2002-556093/59. (first entry) 98US-00178109 98US-00178109 ₿ Sokol PT;

The present sequence is the protein sequence of the long isoform of novel human potassium channel Kv4.3. 2 Isoforms of human Kv4.3 have been identified: the present full-length form (hKv4.3 long); and a second form (see ABB79585), which has a deletion of 19 amino acids in the carboxy domain after the predicted sixth transmembrane domain (hKv4.3 short). Human heart primarily expresses hKv4.3 long, whereas human brain contains both forms. The invention provides Kv4.3 polypeptides, polynucleotides, and methods for producing these polynucleotides. The Kv4.3 polypeptides and polynucleotides are useful in the diagnosis, treatment and screening of human diseases relating to an excess or deficiency of hKv4.3 activity, including Alzheimer's disease and heart disease

New isolated polynucleotide encoding human Kv4.3 potassium channel polypeptide, useful as probe in a diagnostic method for detecting acid encoding human Kv4.3, and for treating Alzheimer's and heart

nucleic

                                                                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the amino acid sequence for an isoform of human Kv potassium channel hKv4.3. The sequence was deduced from an isolated hKv4.3 polynucleotide (see AAV61572), and has 97% identity with rat Kv4.3. Chydrophobicity analysis indicates 6 transmembrane domains, typical of all Kv family related proteins. A shorter isoform (see AAW79589) has been identified, which lacks amino acid residues 488-506 of the longer constraint the invention relates to hKv4.3 polypeptides and polynucleotides, and to methods for producing such polypeptides by crecombinant techniques. hKv4.3 and to raise specific antibodies. Also claimed are methods for utilising such agonists and antagonists of hKv4.3 and to raise specific antibodies. Also claimed are methods for utilising such agonists and antagonists for the treatment of subjects in need of enhanced or reduced activity or expression of hKv4.3 polypeptide. These include the treatment of cardiac arrhythmias and Alzheimer's disease. The invention can also be used to to detect disease associated with inappropriate hKv4.3 expression or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                         The invention relates to a nematode worm that expresses a heterologous nucleotide sequence encoding a functional voltage-gated potassium channel of the Kv4 family, or its analog, mutant, variant, homolog, ortholog, part or fragment. The nematode worm is useful in determining whether a compound interacts with the voltage-gated potassium channel of the Kv4 family or whether a compound is an agonist, antagonist, opener and/or blocker of the voltage-gated potassium channel expressed by the nematode worm. The methods are used for identifying and developing compounds that interact with voltage-gated potassium channels of the Kv4 family. The compositions may be used in the development and/or preparation of compositions for pharmaceutical, agrochemical and/or veterinary use.
                                                                                                                                                                                                                                                                                              a functional vol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a CC that increases or decreases the expression of the polynucleotide sequence CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a continuity in an animal of one or more of the polypoptides given in the CC exivity in an animal of one or more of the polypoptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more pain and a pharmaceutical composition comprising the one or more condulates its activity is useful for preparing a medicament for treating pain decreases its activity is useful for preparing a medicament for treating conjury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (described in Table 3 of the specification, but was obtained in electronic form directly from WIPO at CC fire. WIPO and specification because this patent did not form part of the printed specification contains the printed specification contains the printed specification and spared polypoptical conductors of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the composition of matter suitable for use in identifying chemical compounds that bind to voltage-dependent ion channel proteins. The composition comprises a screening protein that consists of an ion channel voltage sensor domain of the ion channel protein immobilised on a solid support. The invention is useful for identifying chemical compounds (drug candidate) that bind to voltage-dependent ion channel proteins. The drug candidate of the invention is utilised for treating a condition mediated by aberrant electrical activity that initiates uptake or release of neurotransmitters and contraction of muscles. The drug candidate of the invention is also utilised for treating epilepsy and arrhythmia. The present sequence is a voltage-dependent potassium (KV) channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening drug candidates that target voltage dependent ion channel protein, involves contacting screening protein with chemical compound, which is drug candidate and determining whether chemical compound binds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 6;

                                                                                                                                                                                                                                                             Matches 652;
                                                                                                                                                                                                                                                                                                                                             This invention describes a novel potassium channel protein (I) that is either human Kv4.1 or Kv4.2. Eukaryotic cells that express potassium channels containing (I) are used to identify and test: (i) compounds for treatment of neurodegenerative diseases (autism, epilepsy, ischemia, stroke; Alzheimer's, Parkinson's and Huntington's diseases) or cardiac arrhythmia, or those that improve learning capacity and memory; and (ii) activators of protein kinases. Host cells that express (I) can identify agents that do not interact significantly with channels and control I to (a quickly activated transient current), so lack the side effects of known anti-arrhythmic agents. They also eliminate, or reduce, the need for testing on organ cultures
                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New potassium channel subunit proteins, useful for identifying and testing potential pharmaceuticals, e.g. anti-arrhythmic or neurolog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; Kv4.1; potassium channel protein; Kv4.2; autism; epilepsy; neurodegenerative disease; ischemia; stroke; Alzheimer's disease; parkinson's disease; Huntington's disease; cardiac arrhythmia; me learning capacity; protein kinase activator; anti-arrhythmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB86321

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        왕왕
  The present sequence is the protein sequence of the short isoform of novel human potassium channel Kv4.3. 2 Isoforms of human Kv4.3 have been identified: a full-length form (hKv4.3 long) (see ABB79584); and the short form, which has a deletion of 19 amino acids in the carboxy domain after the predicted sixth transmembrane domain (hKv4.3 short). Human heart primarily expresses hKv4.3 long, whereas human brain contains both forms. The invention provides Kv4.3 polypeptides, polynucleotides, and methods for producing these polynucleotides. The Kv4.3 polypeptides and
                                                                                                                                                                                                                                                                                     New isolated polynucleotide encoding human Kv4.3 potassium channel polypeptide, useful as probe in a diagnostic method for detecting acid encoding human Kv4.3, and for treating Alzheimer's and heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Kv4.3; potassium channel; human; Alzh

                                                                                                                                                                                                                                                                                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     channel hKv4.3. The sequence was deduced from an isolated hKv4.3
cpolynucleotide (see AAV61571), and has 99% identity with rat Kv4.3.
chydrophobicity analysis indicates 6 transmembrane domains, typical of all Kv family related proteins. A longer isoform (see AAW79590) has been identified, which has an additional 19 amino acids inserted between amino acids 487 and 488. The invention relates to hKv4.3 polypeptides and polynucleotides, and to methods for producing such polypeptides by recombinant techniques. hKv4.3 polypeptides can be used to identify agonists and antagonists of hKv4.3 polypeptides can be used to identify activity or claimed are methods for utilising such agonists and antagonists for the treatment of subjects in need of enhanced or reduced activity or expression of hKv4.3 polypeptide. These include the treatment of cardiac arrhythmias and Alzheimer's disease. The invention can also be used to to derivity disease associated with inappropriate hKv4.3 expression or

                                  This is the amino acid sequence for an isoform of human Kv potassium channel hKv4.3. The sequence was deduced from an isolated hKv4.3. C polynucleotide (see AAV61573), and has 98% identity with rat Kv4.3. C polynucleotide (see AAV61573), and has 98% identity with rat Kv4.3. C polynucleotide proteins hKv4.3 isoforms (see AAW79599 and AAW79590) C are also claimed. The invention relates to hKv4.3 polypeptides and C polynucleotides, and to methods for producing such polypeptides by recombinant techniques. hKv4.3 polypeptides can be used to identify C agonists and antagonists of hKv4.3 polypeptides can be used to identify C agonists are methods for utilising such agonists and antagonists for the C treatment of subjects in need of enhanced or reduced activity or expression of hKv4.3 polypeptide. These include the treatment of cardiac arrhythmias and Alzheimer's disease. The invention can also be used to to detect disease associated with inappropriate hKv4.3 expression or

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also Cc claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence Which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent CC that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially composition and that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating compound that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound that segmental nerve injury (CMung), chronic constriction conjury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification, which is differentially expressed during pain. Note: specification, which is differentially expressed during pain. Note: specification, but was obtained in electronic form directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New composition comprising preparing a medicament for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
        This invention describes a novel ovarian tumour protein which can be us to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. T products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and inhibiting the development of cancer, particularly ovarian cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                10-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel ovarian tumour protein which can be u to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides encoding tumor proteins, treating or inhibiting the development of cancer, particularly ovarian cancer, and for stimulating and/or expanding T cells specific for a tumor protein.
